

Features

- 0-10V/PWM/Rx dimming +12V
- High efficiency up to 94%
- THD < 15%
- Output current adjustable via programmer
- Dims to off without afterglow
- Surge protection: L-N: 6kV; L/N-GND: 6kV
- Non-isolated; flicker free
- All-round protections: open circuit and short circuit
- IP54; suitable for Class I light fixtures

Applications

· Shoebox light · grow lighting · flood light · wall light

Descriptions

LF-FAA150(PB) is a 3-in-1 dimming + 12V AUX output constant current LED driver. It features software programming of max. current, super-high efficiency, high PF and low THD. It meets the latest European ERP standard and North American DLC standard to meet the different individual needs of customers.

Product Model

LF- FAA 150 (PB)

- PB: built-in grow lighting
- 150: output power: 150W
- A: 3-in-1 dimming + 12V (light sensor optional)
- F: non-isolated design; A: serial number

Test Equipment	Digital power meter: CHROMA6530, digital power driver: CHROMA66205, oscilloscope: Tektronix DPO3014, DC electronic load: M9712B, LED board, constant temperature and humidity chamber; lightning surge generator: Everfine EMS61000-5B; fast transient generator: Everfine EMS61000-4A, spectroanalyzer: KH3935, Hi-pot tester: EEC SE7440, flicker tester (flicker-free coefficient test): Everfine LFA-3000, etc.	
Test Remark	If there are no special remarks, the above parameters are tested at the ambient temperature of 25°C, humidity of 50%, full load and input voltage of 230Vac.	

■ **Electrical Characteristics**

Additional Remarks	1. It is recommended that user install over voltage protection, under voltage protection and surge protection devices in the power supply circuits of light fixtures to ensure electricity safety. 2. The PC cover, casing and end cap for assembling the LED driver in the light fixture must meet the fire rating of UL94-V0 or above. 3. The LED driver used in combination with the end device is one of the accessories of the whole light fixture, and the EMC of the whole light fixture is not only susceptible to the driver itself, but to the LED light fixture and the whole light fixture's wiring. Thus, the manufacturer of LED light fixture should re-confirm the EMC of the whole light fixture before the whole light fixture is finished. 4. When using the LED driver, please pay attention that the total output power should not exceed the maximum rated output power, otherwise the warranty service of LED driver will fail. 5. Because there is parasitic capacitance between LEDs and the PCBA, there will be a slight flicker when the PCBA (the light fixture) is grounded and AC is powered on. It's normal for non-isolated products. To avoid this phenomenon, please choose a light board with lower parasitic capacitance. 6. When conducting withstanding voltage test on LED driver, please short-circuit the input wire L and N; the positive electrode and negative electrode of the output wire; the positive electrode and negative electrode of the dimming wire and AUX power supply. 7. The withstand voltage between LEDs and PCBA should be >2.5KVac. 8. Lifud reserves the right of final interpretation of the above parameters.

■ Heat Dissipation Specification

It is well-advised to apply the thermally conductive silicone grease between the radiator on the light fixture and LED driver so as to ensure that the driver is in close contact with the light fixture. Moreover, the casing temperature (T_c) shall not exceed $+90^\circ\text{C}$.

■ Transportation and Storage

1. Transportation

- Suitable transportation means: vehicles, boats and aeroplanes.
- In transit, it is necessary to prepare awnings for rain or sun protection. Moreover, please keep civilized loading and unloading to prevent the vibration or impact on LED driver as much as possible.

2. Storage

- The storage of LED driver shall conform to the standard of Class I environment. When using LED drivers which have been stored for more than 6 months, please re-test them firstly. Do not use them unless they are tested to be qualified.

Cautions

- Please use Lifud LED driver according to its parameters in the specification, otherwise the LED driver may malfunction.
- Using any incompatible light fixtures or those that have not been certified may cause fire, explosion or other risks.
- Man-made damage is beyond the scope of Lifud warranty service.
