

Features

- 0-10V/PWM/Rx dimming (max. current settable via software programming)
- 0-10V/PWM/Rx + 12V AUX
- 5 shifts knob dimming + two RJ25 parallel ports
- High efficiency up to 96%
- THD < 15%
- Dims to off without afterglow
- Surge protection: L-N: 6kV; L/N-GND: 10kV
- Non-isolated; flicker free
- All-round protections: over-temperature/open circuit/short circuit
- Suitable for Class I light fixtures

Applications

· High-pole lighting · stadium lighting · UV-LED · fishing lighting · grow lighting

Descriptions

LF-FDA720(PI) is a 3-in-1 dimming + 12V AUX output two-stage constant current LED driver. Its output terminal has 5-shift dimming knob and two RJ25 parallel ports to adjust the current internally or externally. It also features software programming of max. current, super-high efficiency, high PF and low THD.

Product Model

LF - FD A 720 (PI)

- PI: independent grow lighting
- 720: output power: 720W
- A: 3-in-1 dimming + 12V
- F: non-isolated design; D: serial number

■ Electrical Characteristics

Additional Remarks	1. It is recommended that user install over voltage protection, under voltage protection and surge protection devices in the power supply circuits of light fixtures to ensure electricity safety. 2. The PC cover, casing and end cap for assembling the LED driver in the light fixture must meet the fire rating of UL94-V0 or above. 3. The LED driver used in combination with the end device is one of the accessories of the whole light fixture, and the EMC of the whole light fixture is not only susceptible to the driver itself, but to the LED light fixture and the whole light fixture's wiring. Thus, the manufacturer of LED light fixture should re-confirm the EMC of the whole light fixture before the whole light fixture is finished. 4. When using the LED driver, please pay attention that the total output power does not exceed the maximum rated output power, otherwise the warranty service of LED driver will fail. 5. Because there is parasitic capacitance between LEDs and the PCBA, there will be a slight flicker when the PCBA (the light fixture) is grounded and AC is powered on. It's normal for non-isolated products. To avoid this phenomenon, please choose a light board with lower parasitic capacitance. 6. When conducting withstanding voltage test on LED driver, please short-circuit the input wire L and N; the positive electrode and negative electrode of the output wire. 7. The RJ25 port is not waterproof, so pay attention to the use environment to prevent water from affecting the normal operation of the LED driver. 8. Lamp beads should not be exposed outside. 9. The withstand voltage between LEDs and PCBA should be >2.5KVac.

■ Dimming Operation Instructions

0-10V Dimming Operations

- Connect 0-10V signal to DIM terminal.
- In 0-10V dimming mode, when the input voltage is $0.8V \pm 0.15$, the light turns off; when it's $1.0V \pm 0.15$, the light turns on.
- Dimming depth: 10% (typical value); maximum is <12%

■ Transportation and Storage

1. Transportation

- Suitable transportation means: vehicles, boats and aeroplanes.
- In transit, it is necessary to prepare awnings for rain or sun protection. Moreover, please keep civilized loading and unloading to prevent the vibration or impact on LED driver as much as possible.

2. Storage

- The storage of LED driver shall conform to the standard of Class I environment. When using LED drivers which have been stored for more than 6 months, please re-test them firstly. Do not use them unless they are tested to be qualified.

Cautions

- Please use Lifud LED driver according to its parameters in the specification, otherwise the LED driver may malfunction.
- Using any incompatible light fixtures or those that have not been certified may cause fire, explosion or other risks.
- Man-made damage is beyond the scope of Lifud warranty service.
